Science Academies' Lecture Workshop
"New Horizons in Genetics"
Department of Zoology
Yogi Vemana University, Kadapa
held on 7-8th February 2018

Report for the lecture workshop

The two-day lecture workshop on "New Horizons in Genetics" was organized by the Department of Zoology, Yogi Vemana University, Kadapa, A.P., in association with Indian Academy of Sciences (Bengaluru), Indian National Science Academy (New Delhi), The National Academy of Sciences, India (Allahabad). The enormous response was well recognized through the registration of around **150 participants**. The aim of this lecture workshop was to promote the study of Genetics and to know the advances in this field.

The workshop was initiated with registration of the participants at 9:30 to 10:00 AM on 7 Feb 2018. The program was started off with the inaugural ceremony at 10.00 am with a warm welcome by Dr. Venkata Rami Reddy Narala, Coordinator, Lecture Workshop. In the inaugural session the dignitaries like Prof. H. A. Ranganath, Convener of the workshop, Prof. N.B. Ramachandra, University of Mysore, Prof. N. Ganesh and Prof. N. Upendra from IISc, Bengaluru, and Honorable Vice-chancellor Prof. A. R. Reddy of Yogi Vemana University, Kadapa have participated.

The program started with university invocation song. Prof. H. A. Ranganath, convener of the science academies lecture workshop has highlighted the importance of lecture workshop and spoke on various programs conducted by the science academies. He gave a brief history about Indian academy of Sciences, Bangalore and its association with other academies. He clearly explained the role of science academies in promoting strong science platform in colleges by conducting various programs like summer research fellowships for students and faculties to learn the advanced research, refresher courses for faculties on contemporary topics. He added, lecture workshops are to listen and interact

proteomics, metabolomics to functional profiling. Overall, he gave significant information about genetics through the lens of omics.

Lecture -2. 11.45 – 01:15 PM: Prof. N. B. Ramachandra, University of Mysore

Topic: Recent understanding of genomic variations

Prof. Ramachandra has given basic details of DNA, gene and chromosomes. Then he took his lecture to explain what genome and genomics is and explained genomic variations. Changes in the genome sequences of different individuals leads to variations that is due to increased mutations, sexual reproduction etc. Later he explained the classification of mutations and causes of variation with several examples. He emphasized why to study

genomic variations. He also explained the importance of micro satellites and single nucleotide polymorphisms role in health and diseases. Copy Number Variations (CNVs) study reveals 1kb to several Mb with >90% identity between the genomes of different individuals that is due to deletions, insertions and duplications. He demonstrated their results, the use of CNV tool to study human migration for the first time and proposed new migration routes in addition to the existing ones. He also explained genome evolution by giving examples and causes such as Duplication, rearrangement, and mutation of DNA contribute to genome evolution and in prokaryotes by Lateral Gene Transfer. His lecture was concluded where and how genomic variation can be used to improve the human life. The immediate impact of **genomics is being seen in diagnostics. 1. Identifying genetic abnormalities 2. Identifying victims by their remains. 3. Distinguishing between naturally occurring and intentional outbreaks of infections**

'Research in genetics has huge impact on mankind'

Kadapa: New horizons are evolving in the field of genetics research that has huge impact on the mankind but there is an urgent need to adhere to the strict moral and ethical values stressed Prof Attipalli Ramachandra Reddy, Vice-Chancellor of Yogi Vemana University (YVU). Participating as chief guest and addressing the inaugural session of the two-day workshop on "New horizons in genetics" he affirmed that concepts like genetic engineering, genetic medicine, genome mapping, designer babies and cloning has hugely impacted the mankind especially in the early detection and prevention of some of the genetically inherited diseases. Explaining the theme of the workshop, Coordinator Dr N Venkata Rami Reddy informed that genetics is fast growing field involving various advancements in theory and practice. Two out of three people will be affected by gene variations in their lives as every

individual has his own unique genetic makeup, he added. He thanked the Indian Academy of Sciences, Bengaluru; Indian National Science Academy, New Delhi, and the National Academy of Sciences India, Allahabad who are jointly sponsoring the workshop. The workshop is attended by more than 150 teachers, researchers and students from all over the state. Indian Institute of Science (IISc) Prof H A Rangnath is acting as convener of the workshop in which Prof N B Ramachandra from Department of Genetics and Genomics, University of Mysore; Prof N Nagesh and Prof Upendra of IISc, will deliver special lectures on various developments in the fields of genetic research and development. YVU Registrar Prof K Chandraiah, YVU College Principal Prof K Satyanarayana Reddy, students and staff of the Department of Zoology attended the programme.

Session-II: First day 07-02-2018

Lecture -3. 2:00 – 3:30 PM: Prof. N. Ganesh, Indian Institute of Science, Bengaluru

Topic: DNA damage and Mechanism of DNA Repair

He explained different types of DNA damage and illustrated the different mechanisms for repairing DNA, such as Base Excision repair (BER), Nucleotide Excision Repair (NER), mismatch repair, SOS repair, and mostly he explained the mechanism involved in recombination repair with detailed information. This lecture provided the information regarding various mechanisms for repairing DNA damages. His lecture was more informative to the students as he clearly explained with suitable examples.

Lecture -4. 3:45 – 5:15 PM: Prof. N. Upendra, Indian Institute of Science, Bengaluru

Topic: Genome editing with CRISPR-CAS9

He has explained about an advanced technique that provides an ability to change organism's DNA, i.e., Genome editing. It is a way of making specific changes to the DNA at a specific sequence so that it gets repaired and the genetic disorder caused due to mutations in the genes may get treated. He explained about a new tool based on a bacterial CRISPR-Cas 9 associated protein-9 i.e., CRISPR-CAS9 using recently for genome editing. The key molecules of CRISPR-CAS9 are CAS9- acts as an endonuclease, guide RNA (gRNA)-guided CRISPR RNA chimera, PAM- Protospacer adjacent motif. CRISPR-CAS9 was injected through liposome and this machinery introduce changes in the genome and tries to repair it.

This lecture provides an overview of current progress in developing targeted genome editing technologies and their adaptation in our own labs. The students and the session was made interactive by discussing about the recent

understanding of gene editing technologies. The first day concluded with this session with the participants being given the details of the second day's schedule.

Session-III: Second day 08-02-2018

The second day of the lecture workshop (08-02-2018) started off with the first talk by Prof. N. Ganesh.

Lecture -5. 10:00 – 11:30 PM: Prof. N. Ganesh, Indian Institute of Science, Bengaluru

Topic: DNA repair in health and disease

Prof. Ganesh explained basics of hereditary material. How it was identified and proved by different experiments. He clearly explained with suitable examples with experimental results about the identification of DNA as a genetic material. He continued his lecture on DNA repair mechanism and their role in health and disease after explaining the basics. He explained different defects in DNA repair mechanism and associated clinical disorders with detailed mechanism. He also presented his research data how one can select a problem and carryout research on a problem. The lecture was very active through the session and students were interacted and cleared their doubts.

Lecture -6. 11:45 – 1:15 PM: Prof. N. Upendra, Indian Institute of Science, Bengaluru

Topic: Functional genomics using Drosophila and Zebrafish

Prof. Upendra, in his second talk, had elaborately explained the importance of the functional genomics with two model organisms. The aim of functional genomics studies is to understand the complex relationship between genotype and phenotype on a genome-wide scale was explained. Studies investigate a range of processes such as transcription, translation and epigenetic regulation, to answer relevant biological questions such as: how, when and where genes are expressed, differential expression in various cells and tissues types and states and functional roles of different genes and their participation was explained. He explained using zebra fish and *Drosophila* disease models how the genes function in skeletomuscular systems. He also used CRISPR-Cas technology to study the differential expression of genes. He explained how to understand the molecular and cellular basis of myopathies and neurodegenerative disorders.

Session-IV: Second day 08-02-2018

Lecture -7. 02:00 – 3:30 PM: Prof. N. B. Ramachandra, University of Mysore

Topic: Personalized Genomic Medicine

He gave a wonderful lecture about an emerging field of medicine i.e., Genomic medicine (or) personalized medicine. Our DNA inherited from our parents will decide how we look like and how

our body function. Any defect in these genes leads to various genetic diseases which are classified as Mendelian diseases-follows mendelian laws, chromosomal diseases such as chromosomal aberrations, nontraditional diseases caused due to mitochondrial genome mutations and multifactorial diseases. Genomic medicine is a way to diagnose and treat these diseases. It focuses on the application of genetics, genomics and multiomics to diagnose and treat the diseases and it is a way to customize medical care to our genetic makeup. He explained how the personalized medicines are developing using the human genome sequences and how it will be useful to treat person specific disease. He has given some examples of the genomic medicine under clinical trials. **This lecture was equipped with the knowledge and skills needed to understand the genomic science and medicine.**

Lecture -8. 3:40 – 4:30. PM: Prof. H. A. Ranganath

Topic: “Flow of genetic information through the lens of - 'OMICS' : Part II

Prof. Ranganath, in his second and last lecture, explained about the different omics and their importance in gene regulation and phenotype. In this lecture he mainly focused on synthetic genomes and systems biology. Synthetic genome is a nascent field of synthetic biology that uses aspects of genetic modification on pre-existing life forms, or artificial gene synthesis to create new DNA or entire life forms. He explained the history of synthetic genomics, Minimal genome, Minimal Genome Concept. He also touched up on the synthesis of two algal chromosomes and synthetic yeast genome project. He commented on the advantages and disadvantages of synthetic genomes and future possible applications. Finally, **he also emphasized on the ethical-legal issues associated with synthetic genome project human genome etc.** This session was more effective, and students were interacted with Prof. Ranganath and he answered students' questions.

Open house discussion and Valedictory session: 4:30 to 5:15

This interactive session was followed by an open discussion to the audience regarding their questions in the field of genetics and scope, career in this field. Prof. H. A. Ranganath, Prof. Ramachandra and Prof. Upendra replied to the queries arose by the students and faculties during the open discussion session. Some of the students asked about the Science Academies programs exclusively for the students and their benefits. Followed by feedback from external and internal participants were volunteered for the feedback on the entire workshop proceedings.

The two-day lecture workshop was concluded with a valedictory function presided by department faculty and vote of thanks by Dr. A.T. Venkaramana Reddy, Dept. of Zoology, YV University followed by distribution of certificates to the participants. The workshop witnessed a bravura contribution where around 150 participants including students, research scholars as well as faculty members were enthusiastically present. Each of the talk was concluded by getting the floor open to audience for discussion. The participants volleyed questions of diverse concerns and were aptly replied to by the individual speakers. The participants and the speakers discussed and exchanged views at large. Overall, the lecture was a fruitful event.

TEA BREAK	

With an aim of enhancing team performance through experiential learning, Department of Business Management, Yogi Vemana University, Kadapa organized a two day workshop on **“OUTBOUND TRAINING PROGRAMME FOR MANAGEMENT GRADUATES”** on February 9-10, 2018 for MBA and MBA (HRM) students. The training programme was conducted at the main campus of Y.V.U which is two kilometers away from the department.

REGISTRAR
YOGI VEMANA UNIVERSITY
KADAPA-516 005.

The objectives of the programme was to

- To understand the individual and team behavior and make the students experience the relevant aspects of intra-personal and interpersonal management.
- To develop skills in the areas of teamwork, communication, leadership, time management, decision making, delegation, coordination, planning and resource utilization.

Eighty five students (includes MBA & MBA-HRM) from the department of Business Management participated in the training programme. The workshop Convener and Coordinator of the Department of Business Management, YVU, Dr. B. Gangaiah enumerated on the theme and objectives of the workshop.

REGISTRAR
 YOGI VEMANA UNIVERSITY
 KADAPA-516 005.

In the inauguration delivery the chief guest of the programme Honorable Vice-chancellor Prof. Arjula Ramachandra Reddy said that, the outbound training increases self-confidence among students and he also advised management students to learn the required skills for the present day job market.
